

Connecting to the SPC Wireless Network from an Android device

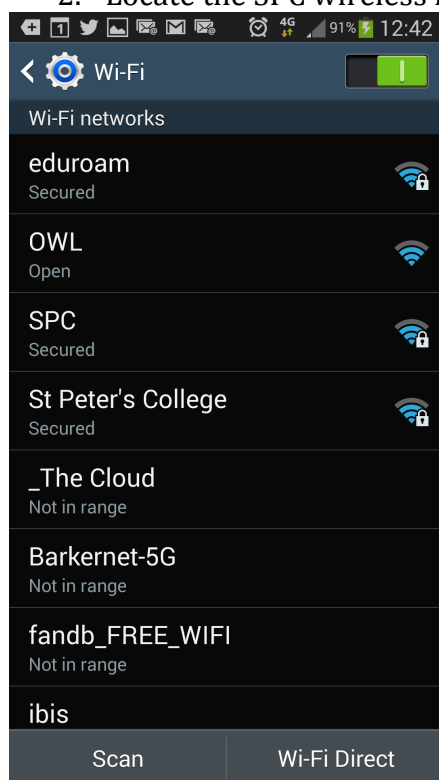

Prerequisite:

For the best performance we recommend that you Android 3.0 or greater. Android 2.x may work, but there have been issues reported with this, which Android have no plans to fix as it is no longer a supported version.

In order to set this up you need to have a Remote Access password. This is the same password that you use for the VPN service or Eduroam. If you don't have one or need to reset it, go to <https://register.it.ox.ac.uk/> and select Create a Remote Access Account or Reset a Remote Access Password.

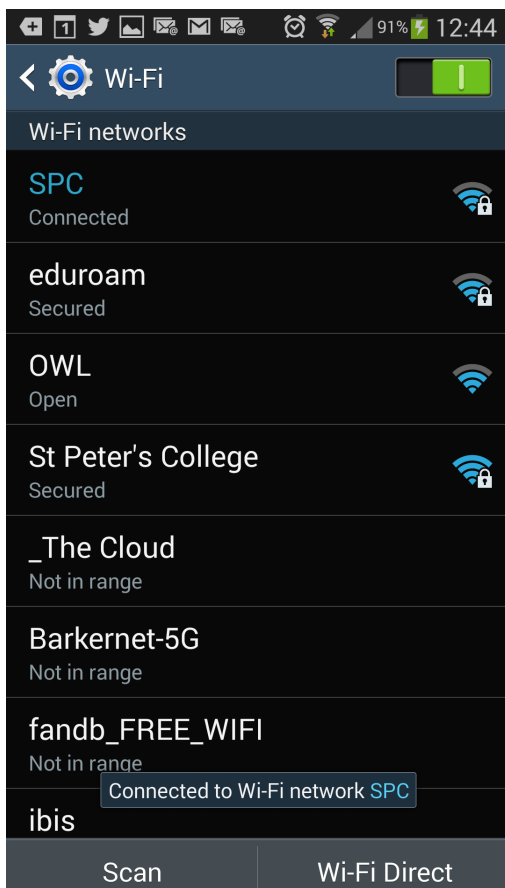

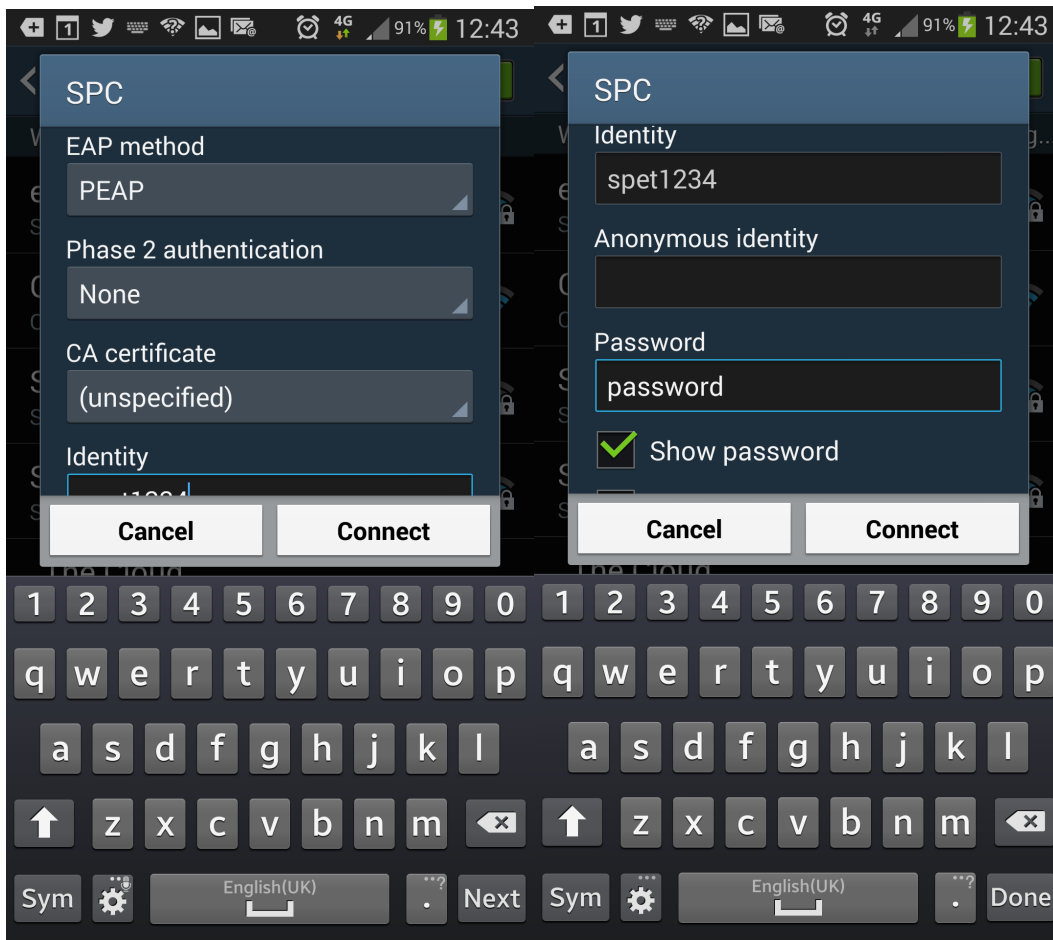

Setup:

1. Go to Settings, then select Wifi, to bring up the wireless network options.
2. Locate the SPC wireless network, and tap on it.

3. Press connect to bring up the connection screen. In this screen, you need to select the following options
 - EAP Method: PEAP
 - Phase 2 authentication: MSCHAPV2
 - CA Certificate: (unspecified)
 - Identity: Your University Username, i.e spet1234

- Anonymous identity: (leave blank)
- Password: Your Remote Access Password

After this, press connect and your device should connect to the network.

If it fails to connect, please try reset your password (see the top section for how) or if that doesn't work contact the IT Office.
