Math Pre-Course

This pre-course in Mathematics has been developed for the use by students preparing for the Preliminary Examinations in PPE, Economics and Management and History and Economics. It covers the mathematical techniques that the students need for Introductory Economics.

You should go over the material of chapters 1-7 answering the short questions in the templates provided. If you are familiar with the material covered in the chapters you might want to jump straight to the questions. If you need to remind yourself of some of the concepts, or if they are new to you, the chapters provide detailed explanations and solved examples that will be helpful. Write down any unresolved doubt and we will go over it once you are here. Chapters 8-10 will be covered during term time.

TO DO: You should submit the answers to the exercises of Ch1-7, in the templates provided, before September 30st.
Answers should be sent by e-mail to anne.millard@spc.ox.ac.uk.
Please in the e-mail subject state your course (PPE,E&M,H&E) and your surname.

We are looking forward to welcoming you in October.

Regards.

Massimo Antonini and Inés Moreno de Barreda
